

ChatGPT

Write a beginner-friendly C++ console program that generates random student excuses.

The program should:

- Ask for the student's name
- Store at least 10 excuses in a vector
- Replace {name} with user input
- Show a random excuse each time

Here's a **clean, beginner-friendly C++ program** that meets all your requirements

Student Excuse Generator

(C++)

Ask anything

C++

✓ Student Excuse Generator (C++)

C++

```
#include <iostream>
#include <vector>
#include <cstdlib>
#include <ctime>
using namespace std;

// Function to replace {name} with ac
string replaceName(string text, string name,
    size_t pos = text.find("{name}"));

while (pos != string::npos) {
    text.replace(pos, 6, name);
    pos = text.find("{name}");
}

return text;
}

int main() {
    string name;

    cout << "🎓 Student Excuse Generator\n";
    cout << "Enter your name: ";
    getline(cin, name);

    // Handle empty input
    if (name.empty()) {
        cout << "⚠️ Name cannot be empty\n";
    }

    // Seed random generator
```

ChatGPT

```

// Handle empty input
if (name.empty()) {
    cout << "⚠ Name cannot be empty\n";
    return 0;
}

// Seed random generator
srand(time(0));

// Vector of excuses (10+)
vector<string> excuses = {
    "{name} couldn't complete the",
    "{name} was about to finish t",
    "{name} tried completing the",
    "{name} completed everything,",
    "{name} was ready to submit,",
    "{name} had a sudden power cu",
    "{name} was not feeling well",
    "{name} forgot to bring the n",
    "{name} saved the file in the",
    "{name} got stuck helping a f",
    "{name}'s pet walked over the
};

// Generate random index
int randomIndex = rand() % excuse

// Replace {name} with actual inp
string finalExcuse = replaceName(

// Output
cout << "\n📢 Your Excuse:\n";
cout << finalExcuse << endl;

return 0;
}

```

How it works (simple

ChatGPT

My C++ program gives the same output every time even though I am using `rand()`. Can you fix this and explain why?

Your program isn't actually "random" yet — it just *looks* like it is. The issue is simple:

👉 You didn't seed the random number generator.

❌ Why your output is the same every time

When you use:

C++

`rand()`

Ask anything

C++ starts with a fixed starting value

(seed) by default.

ChatGPT

✗ Why your output is the same every time

When you use:

```
C++
```

```
rand()
```

C++ starts with a **fixed starting value (seed)** by default.

So every time your program runs, it generates the **same sequence** like:

```
Code
```

```
5 → 2 → 8 → 1 → ...
```

That's why your excuse doesn't change.

✓ The Fix

You need to add this line **once at the start** of

Ask anything

ChatGPT

C++

```
rand()
```

C++ starts with a **fixed starting value (seed)** by default.

So every time your program runs, it generates the **same sequence** like:

Code

```
5 → 2 → 8 → 1 → ...
```

That's why your excuse doesn't change.

The Fix

You need to add this line **once at the start of your program**:

C++

```
srand(time(0));
```

Correct Code Example

ChatGPT

Now give the code

Here's your **fixed C++ code** that will now generate a *different excuse each time* using `srand(time(0))` 📌

✅ Student Excuse Generator (Random Fixed)

C++

```
#include <iostream>
#include <vector>
#include <cstdlib>
#include <ctime>
using namespace std;

// Function to replace {name} with ac
string replaceName(string text, string name) {
    size_t pos = text.find("{name}");
    while (pos != string::npos) {
        text.replace(pos, 6, name);
        pos = text.find("{name}");
    }
    return text;
}
```

⊕ Ask anything

8:10

text.replace(pos, 6, name);
pos = text.find("{name}");

ChatGPT

In my program, {name} is not being replaced with the actual input.

Can you fix this and explain the logic?

That issue happens because C++ **doesn't automatically replace text like {name}** — you have to manually find and replace it in the string.

Let's fix it properly 🙌

✅ **FIXED CODE** (with working {name} replacement)

C++

```
#include <iostream>  
#include <vector>
```

Ask anything

ChatGPT am>

```
...include <string>
#include <cstdlib>
```

Share Message

That issue happens because C++ **doesn...

```
string replaceName(string text, string name) {
    size_t pos = text.find("{name}");

    // Loop until all occurrences are replaced
    while (pos != string::npos) {
        text.replace(pos, 6, name); // Replace {name} with name
        pos = text.find("{name}");
    }

    return text;
}

int main() {
    string name;

    cout << "Enter your name: ";
    getline(cin, name);

    srand(time(0));

    vector<string> excuses = {
        "{name} couldn't complete the",
        "{name} was about to finish t",
        "{name} tried completing the"
    };

    int index = rand() % excuses.size();

    // ✅ Replace {name}
    string finalExcuse = replaceName(
        cout << "\nYour Excuse:\n";
```

+ Ask anything

```

using namespace std;

// Function to replace {name} with ac
string replaceName(string text, string name,
    size_t pos = text.find("{name}"));

// Loop until all occurrences are
while (pos != string::npos) {
    text.replace(pos, 6, name); /
    pos = text.find("{name}");
}

return text;
}

int main() {
    string name;

    cout << "Enter your name: ";
    getline(cin, name);

    srand(time(0));

    vector<string> excuses = {
        "{name} couldn't complete the",
        "{name} was about to finish t",
        "{name} tried completing the"
    };

    int index = rand() % excuses.size

    // ✅ Replace {name}
    string finalExcuse = replaceName(

    cout << "\nYour Excuse:\n";
    cout << finalExcuse << endl;

```

ChatGPT

Improve my program:

- Use getline instead of cin
- Handle empty input
- Make output more user-friendly

Here's an **improved, beginner-friendly version** of your program with all the upgrades you asked for:

- ✓ Uses `getline()` (handles full names)
- ✓ Handles empty input properly
- ✓ Cleaner, more user-friendly output

✓ Improved Student Excuse Generator
